The most common components you might want to use are

- *Instances* - your data
- *Filter* - for preprocessing the data
- *Classifier/Clusterer* - built on the processed data
- *Evaluating* - how good is the classifier/clusterer?
- *Attribute selection* - removing irrelevant attributes from your data

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regrettably, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

The following sections explain how to use them in your own code. A link to an **example class** can be found at the end of this page, under the [Links](#) section. The classifiers and filters always list their options in the Javadoc API

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>) specification.

(book, stable, developer version)
You might also want to check out the [Weka Examples](#) collection, containing examples for the different versions of Weka. Another, more comprehensive, source of information is the chapter *Using the API* of the Weka manual for the stable-3.6

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

re
/
d

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

The
class
index
indicates
the
target
attribute
used
for
classification.
By
default,
in
an
ARFF
file,
it
is
the
last
attribute,
which
explains
why
it's
set
to
numAttributes-1.
You
must
set
it
if
your
instances
are
used
as
a
parameter
of
a
weka

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)
(e.g.,:

❗ **✖** It's time for us to say farewell... Regrettably, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

3.5.5
and
newer

The DataSource class is not limited to ARFF files. It can also read CSV files and other formats (basically all file formats that Weka can import via its converters).

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Database

Reading
from
[Databases](#)
is
slightly
more
complicated,
but
still
very
easy.
First,
you'll
have
to
modify
your
[DatabaseUtils.props](#)
file
to
reflect
your
database
connection.
Suppose
you
want
to
connect
to
a
[MySQL](#)
server
that
is
running

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell...! Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

on
the
local
machine
on
the
default
port
3306.
The
MySQL
JDBC
driver
is
called
[Connector/J](#) .
(The
driver
class
is
org.gjt.mm.mysql.Driver.)
The
database
where
your
target
data
resides
is
called
some_database.
Since
you're
only
reading,
you
can
use
the
default
user
nobody
without

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)
password.

❗ **✖** It's time for us to say farewell...! Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

must
contain
the
following
lines:

```
jc  
jc
```

Secondly,
your
Java
code
needs
to
look
like
this
to
load
the
data
from
the
database:

```
ir  
ir  
..  
It  
q  
q  
q  
/  
/  
In
```

Notes:
'site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code')

❗ **✖** It's time for us to say farewell... Regrettably, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

- Don't add the JDBC driver to your CLASSPATH.
- For MS Access, you must use the JDBC-ODBC-bridge that is part of a JDK. The [Windows databases](#) article explains how to do this.
- InstanceQuery automatically converts VARCHAR database columns to NOMINAL attributes,

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regrettably, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

and
long
TEXT
database
columns
to
STRING
attributes.
So
if
you
use
InstanceQuery
to
do
text
mining
against
text
that
appears
in
a
VARCHAR
column,
Weka
will
regard
such
text
as
nominal
values.
Thus
it
will
fail
to
tokenize
and
mine
that
text.
Use
the

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%20WEKA%2520in%2520your%2520Java%2520code)

 **✖** It's time for us to say farewell... Sadly, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

NominalToString

or

StringToNominal

filter

(package

weka.filters.unsupervised.attribute)

to

convert

the

attributes

into

the

correct

type.

Option handling

Weka schemes that implement the weka.core.OptionHandler interface, such as classifiers, clusterers, and filters, offer the following methods for setting and retrieving options:

- void setOptions(String[] options)

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)
getOptions()

❗ x It's time for us to say farewell! Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

are
several
ways
of
setting
the
options:

- Manually
creating
a
String
array:

S
o
o

- Using
a
single
command-
line
string
and
using
the
splitOptions
method
of
the
weka.core.Utils
class
to
turn
it
into
an
array:

S

Using

the

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

OptionsToCode.java

[Details](#) [Download](#) 2 KB

class
to
automatically
turn
a
command
line
into
code.
Especially
handy
if
the
command
line
contains
nested
classes
that
have
their
own
options,
such
as
kernels
for
SMO:

jē

will
generate
output
like
this:

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Also,
the

OptionTree.java
[Details](#) [Download](#) 8 KB

tool
allows
you
to
view
a
nested
options
string,
e.g.,
used
at
the
command
line,
as
a
tree.
This
can
help
you
spot
nesting
errors.

Filter
A
filter

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✕** It's time for us to say farewell... Regrettably, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

has
two
different
properties:

- *supervised*
or
unsupervised
either
takes
the
class
attribute
into
account
or
not
- *attribute-*
or
instance-
based
e.g.,
removing
a
certain
attribute
or
removing
instances
that
meet
a
certain
condition

Most
filters
implement
the
OptionHandler
interface,
which
means
you

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

can
set
the
options
via
a
String
array,
rather
than
setting
them
each
manually
via
set-
methods.
For
example,
if
you
want
to
remove
the
first
attribute
of
a
dataset,
you
need
this
filter

W

with
this
option

-f

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

The
[FilteredClassifier](#)
meta-
classifier
is

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

✖ It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

an
easy
way
of
filtering
data
on
the
fly.
It
removes
the
necessity
of
filtering
the
data
before
the
classifier
can
be
trained.
Also,
the
data
need
not
be
passed
through
the
trained
filter
again
at
prediction
time.
The
following
is
an
example
of

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Other

handy
meta-
schemes
in
Weka:

- [weka.clusterers.FilteredClusterer](#)
(since
3.5.4)
- [weka.associations.FilteredAssociator](#)
(since
3.5.6)

Batch filtering

On
the
command
line,
you
can
enable
a
second
input/output
pair
(via
-r
and
-s)
with
the
-b
option,
in
order
to

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

process
the
second
file
with
the
same
filter
setup
as
the
first
one.
Necessary,
if
you're
using
attribute
selection
or
standardization
-
otherwise
you
end
up
with
incompatible
datasets.
This
is
done
fairly
easy,
since
one
initializes
the
filter
only
once
with
the
setInputFormat(Instances)

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

method
name
i.e.
with
the
training
set,
and
then
applies
the
filter
subsequently
to
the
training
set
and
the
test
set.
The
following
example
shows
how
to
apply
the
Standardize
filter
to
a
train
and
a
test
set.

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **x** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Calling conventions

The
setInputFormat(Instances)
method
always
has
to
be
the
last
call
before
the
filter
is
applied,
e.g.,
with
Filter.useFilter(Instances,Filter).
Why?
First,
it
is
the
convention
for
using
filters
and,
secondly,
lots
of
filters
generate
the
header
of
the
output

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (http://blog.wikispaces.com)

format
in
the
setInputFormat(Instances)
method
with
the
currently
set
options
(setting
options
after
this
call
doesn't
have
any
effect
any
more).

Classification

The
necessary
classes
can
be
found
in
this
package:

w

Building
a
Classifier

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

 **✖** It's time for us to say farewell...! Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Batch
A
Weka
classifier
is
rather
simple
to
train
on
a
given
dataset.
E.g.,
we
can
train
an
unpruned
C4.5
tree
algorithm
on
a
given
dataset
data.
The
training
is
done
via
the
buildClassifier(Instances)
method.

Incremental

implementing

the

`weka.classifiers.UpdateableClassifier`

interface

can

be

trained

incrementally.

This

conserves

memory,

since

the

data

doesn't

have

to

be

loaded

into

memory

all

at

once.

See

the

Javadoc

of

this

interface

to

see

what

classifiers

are

implementing

it.

The

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

actual
process
of
training
an

incremental
classifier
is
fairly
simple:

- Call `buildClassifier(Instances)` with the structure of the dataset (may or may not contain any actual data rows).
- Subsequently call the `updateClassifier(Instance)` method to feed the classifier new `weka.core.Instance` objects, one by one.

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Here
is
an
example
using
data
from
a
weka.core.converters.ArffLoader
to
train
weka.classifiers.bayes.NaiveBayesUpdateable:

```
//  
A  
lo  
In  
s  
  
//

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Why?

if
the
classifier
does
not
abide
to
the
Weka
convention
that
a
classifier
must
be
re-
initialized
every
time
the
buildClassifier
method
is
called
(in
other
words:
subsequent
calls
to
the
buildClassifier
method
always
return
the
same
results),
you
will
get
inconsistent
and

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Incremental

Clusterers
implementing
the
weka.clusterers.UpdateableClusterer
interface
can
be
trained
incrementally
(available
since
version
3.5.4).
This
conserves
memory,
since
the
data
doesn't
have
to
be
loaded
into
memory
all
at
once.
See
the
Javadoc
for
this
interface
to
see
which

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

clusterers
implement
it.

The
actual
process
of
training
an
incremental
clusterer
is
fairly
simple:

- Call `buildClusterer(Instances)` with the structure of the dataset (may or may not contain any actual data rows).
- Subsequently call the `updateClusterer(Instance)` method to feed the clusterer new `weka.core.Instance` objects,

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗

✖

Evaluating

For
evaluating
a
clusterer,
you
can
use
the
ClusterEvaluation
class.
In
this
example,
the
number
of
clusters
found
is
written
to
output:

ir
ir
..
C

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell. Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Or,
in
the
case
of
[density
based
clusters](#) ,
you
can
cross-
validate
the
clusterer
(Note:
with
[MakeDensityBasedClusterer](#)
you
can
turn
any
clusterer
into
a
density-
based
one):

Instead
of
classifyingInstance(Instance)
it
is
now
clusterInstance(Instance).
The
method
for
obtaining
the
distribution
is
still
the
same,
i.e.,
distributionForInstance(Instance).

Classes to clusters evaluation

If
your
data
contains
a
class
attribute
and
you
want
to
check
how
well
the
generated
clusters

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

the
classes
you
can
perform
a
so-
called
classes
to
clusters
evaluation.
The
Weka
Explorer
offers
this
functionality,
and
it's
quite
easy
to
implement.
These
are
the
necessary
steps
(complete
source
code:

ClassesToClusters.java

❗ x It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Meta-
Classifier

The following meta-classifier performs a preprocessing step of attribute selection before the data gets presented to the base classifier (in the example here, this is J48).

I
A
C
C
s
J
c
c
c
/

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

❗ **✖** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Filter

The filter approach is straightforward: after setting up the filter, one just filters the data through the filter and obtains the reduced dataset.

/site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)

 **x** It's time for us to say farewell... Regretfully, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Low-level

If
neither
the
meta-
classifier
nor
filter
approach
is
suitable
for
your
purposes,
you
can
use
the
attribute
selection
classes
themselves.

I

randomization

❗ **x** It's time for us to say farewell. Regrettably, we've made the tough decision to close Wikispaces. Find out why, and what will happen, here (<http://blog.wikispaces.com>)

Most machine learning schemes, like classifiers and clusterers, are susceptible to the ordering of the data. Using a different seed for randomizing the data will most likely produce a different result. For example, the Explorer, or a classifier/clusterer run from the command

line
'site/signin?goto=https%3A%2F%2Fweka.wikispaces.com%2FUse%2520WEKA%2520in%2520your%2520Java%2520code)
uses
only
a
seeded

❗
