

# Examples and customization tricks

Here is a (growing) list of examples. Contact us if you need more examples or have questions. Also take a look at the [comprehensive documentation](#) which contains many example snippets as well. Also, [pytest on stackoverflow.com](#) often comes with example answers.

For basic examples, see

- [Installation and Getting Started](#) for basic introductory examples
- [Asserting with the assert statement](#) for basic assertion examples
- [pytest fixtures: explicit, modular, scalable](#) for basic fixture/setup examples
- [Parametrizing fixtures and test functions](#) for basic test function parametrization
- [unittest.TestCase Support](#) for basic unittest integration
- [Running tests written for nose](#) for basic nosetests integration

The following examples aim at various use cases you might encounter.

- [Demo of Python failure reports with pytest](#)
- [Basic patterns and examples](#)
  - [Pass different values to a test function, depending on command line options](#)
  - [Dynamically adding command line options](#)
  - [Control skipping of tests according to command line option](#)
  - [Writing well integrated assertion helpers](#)
  - [Detect if running from within a pytest run](#)
  - [Adding info to test report header](#)
  - [profiling test duration](#)
  - [incremental testing - test steps](#)
  - [Package/Directory-level fixtures \(setups\)](#)
  - [post-process test reports / failures](#)
  - [Making test result information available in fixtures](#)
  - [PYTEST\\_CURRENT\\_TEST environment variable](#)
  - [Freezing pytest](#)
- [Parametrizing tests](#)
  - [Generating parameters combinations, depending on command line](#)
  - [Different options for test IDs](#)
  - [A quick port of "testscenarios"](#)
  - [Deferring the setup of parametrized resources](#)
  - [Apply indirect on particular arguments](#)
  - [Parametrizing test methods through per-class configuration](#)
  - [Indirect parametrization with multiple fixtures](#)
  - [Indirect parametrization of optional implementations/imports](#)
- [Working with custom markers](#)
  - [Marking test functions and selecting them for a run](#)
  - [Selecting tests based on their node ID](#)
  - [Using `-k expr` to select tests based on their name](#)
  - [Registering markers](#)
  - [Marking whole classes or modules](#)
  - [Marking individual tests when using parametrize](#)
  - [Custom marker and command line option to control test runs](#)
  - [Passing a callable to custom markers](#)
  - [Reading markers which were set from multiple places](#)
  - [marking platform specific tests with pytest](#)
  - [Automatically adding markers based on test names](#)
- [A session-fixture which can look at all collected tests](#)

- [Changing standard \(Python\) test discovery](#)
  - [Ignore paths during test collection](#)
  - [Keeping duplicate paths specified from command line](#)
  - [Changing directory recursion](#)
  - [Changing naming conventions](#)
  - [Interpreting cmdline arguments as Python packages](#)
  - [Finding out what is collected](#)
  - [customizing test collection to find all .py files](#)
- [Working with non-python tests](#)
  - [A basic example for specifying tests in Yaml files](#)
